ANALYSIS

Alcohol	12,5	% vol
Dry extract	24,6	g/l
Residual sugar	5,0	g/l
Total acidity	5,9	g/l (C ₄ H ₆ O ₆)
pH	3,3	

The name LOS MORROS, or “the hills”, comes from the rolling hills of vineyards that run alongside winemaker Miguel Besoain’s family home in Maipo Valley. These vineyards continue south, through the Central Valley of Chile – from this special mountainous terroir, Miguel produces hand-crafted wines using only the highest quality grapes. Miguel’s winemaking style stems from his vast experience working throughout European wine regions producing expressive, young and playful wines with excellent varietal typicity.

CENTRAL VALLEY CHILE

This region starts in Maipo valley and finishes in the Maule Valley, it has a very characteristic topography, with evident presence of the Coast mountains on the west; the Intermediate Depression in the center, where the most production is located; and the Andes Mountains to the east.

The climate of the region is Mild Mediterranean and rainfall increases in southern areas which affects also the geographic conditions of valleys. Nevertheless, are the longitudinal variations that generate the greatest differences. Accordingly, the western slope of the Cordillera de la Costa will present higher rainfall than the Intermediate Depression ("Entre Cordilleras" zone) and they are even more on the western slope of the Andes, at the same latitude. This explains the difference that is possible to see in the same valley and the reason why exist the current denomination: "Andes", "Entre Cordilleras" and "Costa".

Intermediate Depression area near the "Cordillera de la Costa", may have temperatures above 30°C in the warmest month and thermal oscillation of nearly 15 °C in summer. The relative humidity average is between 55% to 60%. At the foothills of the Andes, the summers have slightly lower temperatures and higher relative humidity.

The valleys located in Central region are: Maipo; Rapel (Cachapoal, Colchagua); Curicó and Maule.
